

## **HÖHN & FLURO receive certification for environmental management**

*Rosenfeld, 25.10.2024*

**The two companies Martin Höhn and FLURO-Gelenklager GmbH have once again been successfully certified according to the quality management standard ISO 9001:2015 and for the first time also according to the environmental management standard ISO 14001:2015.**

The ISO 9001:2015 certification confirms that HÖHN & FLURO have implemented a comprehensive quality management system that meets the highest international standards. With the successful certification, the companies prove that they can deliver consistently high product and service quality through defined processes and at the same time ensure continuous improvements in the processes.

In addition, the ISO 14001:2015 certification shows that HÖHN & FLURO are also committed to environmental management and sustainable business practices. With a strong focus on reducing environmental impact, the companies have developed measures to conserve resources and act in an environmentally conscious manner. For example, around 30% of energy consumption is generated by the photovoltaic systems on the company premises. This underlines HÖHN & FLURO's responsibility towards the environment and society and ensures that the two companies follow sustainable and environmentally friendly principles.

"The successful certification reflects the commitment of our entire team to ensuring the highest quality and environmental standards in all our activities," says Reiner Höhn, Managing Director of both companies. "This enables us to create even more trust with our customers and partners and make our contribution to a more sustainable future."

The ISO certifications achieved are an important milestone in HÖHN & FLURO's company history as well as proof of its striving for continuous improvement and innovation.
